### PROFILE

Passionate Software Engineer with a love for crafting elegant digital experiences. I specialise in full-stack web development with a focus on Laravel, PHP and modern JavaScript frameworks.

I take pride in writing clean, maintainable code and delivering projects that are as solid under the hood as they are beautiful on the surface.

---

### EMPLOYMENT HISTORY

#### Senior PHP Developer at Native Teams

October 2025 – April 2026

Working on startup application, in a microservice-oriented environment.

#### Senior PHP Developer at Orange Melons (Remote)

October 2023 – February 2024

Working on a small to medium size application for the Real Estate industry, for a Dutch client. Consists of an Admin part where the system is maintained, and an API environment, for third-party usage.

#### Senior PHP Developer at RoughMaps (Remote)

December 2022 – March 2023

Working on an application for building automated Facebook Ad campaigns. Briefly worked on a couple of Wordpress sites.

#### Software Engineer at Client (through Adeva) (Remote)

September 2022 – August 2025

Working on a project that is in the area of medical research for a gigantic Enterprise. To be precise, Breast Cancer trials and Research. The system is a Monolith application, with third party integrations, mainly to get Medical Records (Medical History) for Patients. PHP Laravel and VueJS were used as the main technologies. Also digital signature is done through the third-party app, for which an existing API is maintained. The system consists of three types of Users: Patients, Researchers and Administrators. The Patients can login, fill in their data, and then consent for their data to be used for medical purposes and consent also for the system to be able to get their Medical History. They can complete surveys, to acquire as much data as possible for them. Researchers can login, create projects and create groups of patients, based on more than 50 criteria items. Example: All Black patients with a particular Breast Cancer diagnosis. On top of that, they get Data Access for those patients, and can conduct Clinical Trials. Administrators have access to almost everything and they maintain the project smooth flow. All Patient-related data is PHI.

#### Software Engineer at Briq Bookings (through Xessable)

March 2020 – August 2022

Working on a project in the Leisure business. It consists of three parts. The e-commerce application, for the end-users to be able to book reservations. Written in Laravel (with jQuery), it has a caching mechanism implementation as well as scheduled tasks, to make sure the latest updates on the offers are reflected. It contains integrations with a lot of payment processors, mainly Dutch ones. The admin application is responsible for maintaining the system; Clients, bookings, deals and many more things are pre-configured there, per Client requests. Written in PHP Laravel and Vue.js. API, the backend that communicates with DB and the two client applications. Written in .NET. I did not have part working on the API. My responsibilities included developing and maintaining the two client applications, mainly the funnel. I was part of an Agile team. Briefly, I was appointed as Team/Tech lead, which lasted almost 9 months. During that period I acquired the Professional Scrum Master I certificate.

#### PHP Software Developer at Cosmic Development

April 2017 – February 2020

Working on small to medium scale projects for a dedicated client. Working alone on a large scale application for a dedicated client. This includes server management and working on the frontend as well (Vue).

#### PHP Software Developer at Vox Teneo Macedonia

October 2016 – March 2017

Development of an enterprise application with several thousand concurrent users, using microservices. Responsible for developing and maintaining the core of the application.

#### PHP Software Developer at Tabellarius Ltd.

February 2015 – September 2016

Developing a product for a startup company. The product was related to communications and marketing. PHP (Laravel) used. Evolved into an Intermediate Developer, with responsibilities: project management, motivating co-workers, software development and maintenance, manual software testing for a start up company project, in communications and marketing.

#### Junior Developer at Info Tech Creativa Ltd.

December 2013 – January 2015

Software development and maintenance, software testing. Product Development for a startup company. Based on .NET MVC architecture.

#### Intern Developer at Komercijalna Banka AD Skopje

August 2012 – August 2012

Working on a prototype M-banking application with Sencha Touch.
